

CITY OF WEST HOLLYWOOD

DEPARTMENT OF PUBLIC WORKS

Engineering and Traffic Survey, October 2016

Santa Monica Boulevard between Fairfax Avenue and east of the city limit

This engineering and traffic survey (E&TS) was prepared for the segment of Santa Monica Boulevard between Fairfax Avenue and east of the city limit in accordance with California Vehicle Code (CVC) Section 627, and is required under CVC 40802 if speed limits are to be enforced by radar or any other electronic device that measures the speed of moving objects. CVC 40802 requires speed zones to be evaluated on a recurring basis to avoid being a "speed trap". If the E&TS is more than 5 years old, courts may reject evidence of speeding obtained through radar or other electronic devices. Engineering and traffic surveys may be up to 7 years old if conditions under CVC 40802(c)(1) related to enforcement training and equipment certification have been met.

The segment of Santa Monica Boulevard is classified as an arterial street in the City of West Hollywood General Plan. The street has two travel lanes in each direction and parallel on-street parking on both sides of the street.

The posted speed limit is 30 mph based on a 2011 E&TS. Speed data collected on April 5, 2016 revealed the 85th percentile speed to be 35 mph.

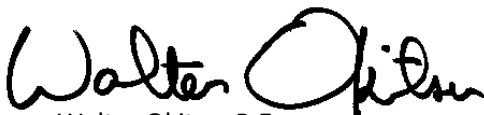

CVC 21400(b) requires the local authority to round speed limits to the nearest five miles per hour of the 85th percentile of the free-flowing traffic. However, the local authority may apply Option 1 within MUTCD Section 2B.13 Paragraph 12a which says "The posted speed may be reduced by 5 mph from the nearest 5-mph increment of the 85th percentile speed, in compliance with CVC Sections 627 and 22358.5." The cited CVC Section 627 says the E&TS must consider the following:

- Accident Records: The expected collision rate on a 4-lane or more undivided highway is 3.55 per million vehicle miles (MVM). With 114 collision recorded over a two-year period and 40,790 average daily traffic, the collision rate has been 3.58 per MVM, which nearly matches the expected rate.
- Highway, traffic, and roadside conditions not readily apparent to the driver: According to CVC 22358.5, "Conditions not readily apparent to the driver" exclude roadway width, curvature, grade, and surface conditions." No downward speed zoning is recommended based on highway, traffic, and roadside conditions not readily apparent to the driver.

CVC 627 also allows optional consideration of residential density as well as pedestrian and bicycle safety. Santa Monica Boulevard has the highest number of bicycle-related collisions in West Hollywood. Ten bicycle-related collisions on this segment east of Fairfax Avenue over a two-year period matches the same bicycle collision rate per mile on the segment west of Fairfax Avenue, which has similar roadway characteristics and also has a 30 mph speed limit. Keeping both segments at 30 mph is recommended.

Recommendation

Based on prevailing speeds reduced by 5 mph with an Option 1 reduction for bicycle safety, the existing posted speed limit of 30 mph should be retained.

Walter Okitsu, P.E.

Registered Traffic Engineer, Calif. TE 1406
