

SIDEWALK PAVING & CROSSWALKS

Sidewalk Paving After considering a number of material choices and proportions of basic versus upgraded material, the AWG preferred natural concrete for new sidewalks, upgrading to either stone or concrete pavers in limited areas throughout the Avenues, and/or upgraded only at curb extensions. The final decision will be made during final design and based on available funding.

Crosswalks The AWG's preference was Duratherm crosswalks (see image at bottom left) for signalized intersections, unless a crossing is required to have zebra stripes for safety reasons. Unsignalized intersections will have continental striping (zebra striping).

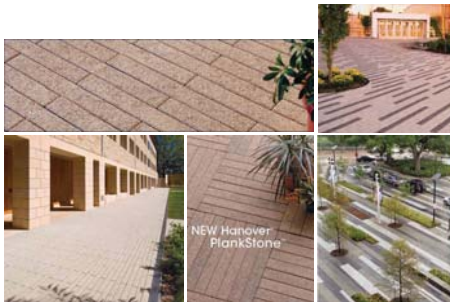

Primary paving will be concrete with a simple scored pattern

Secondary accent paving will be either stone pavers (above) or precast concrete pavers (below)

Duratherm pattern (above left) and continental (striping above right). The Duratherm pattern will be determined during final design, and "LOOK" will be integrated to promote crossing safely.

FURNISHINGS

A Family of Furnishings New modern-style furnishings can be introduced into the Avenues for use on widened sidewalks and gathering places. New furnishing should look good alongside the street lighting and existing furniture, so there is visual cohesiveness across the Avenues.

New furniture should be modern in character and could include:

- benches (with backs and backless)
- bicycle racks
- bollards
- slender benches if used only on narrow sidewalks in conjunction with shelters or located against back surface.

Existing Furnishings West Hollywood is already using a modern Decaux bus shelter with ad panel, perforated metal benches with dividing arms and a perforated metal newsrack corral.

Example of a "family of furniture" by one manufacturer where all pieces look good individually, or combined with others in the same line.

Furnishing options for gathering places could include a high table with barstools, living room style seating with low tables, or artist-designed bicycle racks and trash receptacles.
